According to our (Global Info Research) latest study, the global IoT Connectivity Management Software market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

IoT connectivity management software helps businesses monitor and control the network connections utilized within a connected device infrastructure. Internet of things (IoT) networks entail hundreds or thousands of unique connections between embedded objects and dedicated servers, allowing them to share continuous observations, generate valuable data, and trigger actions across the IoT architecture. IoT connectivity management software provides a centralized view of these specified networks, their various subscription plans, and the flow of data between networks and distributed assets.

According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply promoted. The number of active users exceeds 700 million, mobile network IPv6 traffic accounted for nearly 50%. The total size of China's data center racks exceeds 6.5 million standard racks, with an average annual growth rate of more than 30% in the past five years.
