Abstracts

According to our (Global Info Research) latest study, the global IoT Cybersecurity Label market size was valued at US\$ 420 million in 2025 and is forecast to a readjusted size of US\$ 849 million by 2032 with a CAGR of 10.1% during review period.

IoT Cybersecurity Labels are tags embedded with sensors and communication technologies to provide real-time information and data about a product or item. IoT Labels connect to the Internet of Things (IoT) network via wireless technology, allowing users to monitor, manage and track the status and location of products in real time.

1. Transition from voluntary to mandatory compliance Many countries are moving IoT security labels toward regulatory requirements, making certification a prerequisite for market access similar to energy efficiency labeling.
2. Integration with data privacy regulations Future labels will evaluate not only device security but also encryption, privacy protection, cloud security, and vulnerability management aligned with data protection laws.
3. QR-code and digital verification systems Physical labels will be paired with QR codes and online databases, allowing users to check firmware updates, vulnerability notices, support periods, and security ratings.
4. Lifecycle security management Certification will cover the entire product lifecycle, including secure boot, OTA updates, patch management, and end-of-support security commitments.

5. Expansion into industrial IoT The labeling system will expand from consumer devices to industrial control, energy infrastructure, medical equipment, and smart city systems.
