According to our (Global Info Research) latest study, the global IoT Machine Vision Software market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

IoT machine vision software is the field of artificial intelligence that deals with the intelligent processing of visual information. The human eye takes in light which is received by photoreceptors, known as cones and rods, that sends signals to neurons which lead up to the brain. The brain then processes these signals to interpret what is being seen. A computer acts very similar. Electronic photoreceptors within a camera, known as pixels, take in light and send electrical signals to a microprocessor. IoT machine vision software then interprets what is seen.

According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply promoted. The number of active users exceeds 700 million, mobile network IPv6 traffic accounted for nearly 50%. The total size of China's data center racks exceeds 6.5 million standard racks, with an average annual growth rate of more than 30% in the past five years.
