According to our (Global Info Research) latest study, the global IoT WiFi and Bluetooth Modules market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In function, it is a wireless communication module that integrates Wi-Fi technology and Bluetooth technology.

The advantage of the Bluetooth Wi-Fi combo module is to simplify the hardware structure design and reduce product costs. Developers can develop embedded wireless application products conveniently and quickly, shorten the development time, and are suitable for simple data acquisition and processing of the Internet of Things, remote control etc.

According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply promoted. The number of active users exceeds 700 million, mobile network IPv6 traffic accounted for nearly 50%. The total size of China's data center racks exceeds 6.5 million standard racks, with an average annual growth rate of more than 30% in the past five years.
