Abstracts

According to our (Global Info Research) latest study, the global Ioversol market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Ioversol is an organoiodine compound, which contains one or more carbon-iodine bonds. It is a radiopaque contrast agent that absorbs X-rays. It allows blood vessels, organs, and other non-bony tissues to be seen more clearly on a CT scan or other radiologic (X-ray) examination. This unique property of Ioversol has led to increased application such as in ultrasound scattering and magnetic resonance imaging. It helps to diagnose disorders of the heart, brain, and blood vessels.

Rise in number of accidents and increase in prevalence of bone-related diseases & kidney problems are the key drivers of the global Ioversol market. In addition, growth in geriatric population has led to increased orthopedic disorders and cardiovascular disorders, resulting in the development of the X-ray industry, which in turn fuels the market growth. However, overdose of Ioversol might lead allergic reaction; breathing problem; swelling of the face, lips, tongue, or throat; and dehydration & dry skin, which restrains the market growth. Increase in spending on healthcare and advancements in X-ray, CT scan, and other radiological & diagnostic examinations are anticipated to provide new opportunities for the market players.
