## Abstracts

The global IP Type Intercom Systems market size is expected to reach \$ 10813 million by 2032, rising at a market growth of 7.1% CAGR during the forecast period (2026-2032).

IP intercom systems are intelligent intercom devices that transmit audio and video and control communication via Internet Protocol (IP). They enable remote communication, monitoring, and management through local area networks (LANs) or wide area networks (WANs). Typically composed of front-end terminal equipment, network switching equipment, and a back-end management platform, they are widely used in smart communities, building intercoms, industrial parks, campuses, hospitals, and transportation hubs. Based on the demand for digital security upgrades, it is estimated that global IP intercom system sales will reach approximately 16 million units in 2025, with an average unit price of approximately US\$415 and a capacity utilization rate of approximately 79%. The upstream of the industry chain mainly includes network communication chip manufacturers, video codec chip companies, camera module manufacturers, electronic component suppliers, and structural component manufacturers. The midstream consists of IP intercom equipment manufacturers and system integrators. The downstream covers real estate developers, property management companies, government agencies, schools, hospitals, industrial parks, and transportation infrastructure operators. The overall gross profit margin is approximately 33%, with companies possessing platform software and system integration capabilities reaching 42%. The product cost structure... The main components are: main control and communication chips (approximately 25%), camera and audio modules (approximately 20%), display modules and structural components (approximately 18%), software and platform development (approximately 15%), assembly and testing (approximately 10%), channels and logistics (approximately 7%),

and other costs (approximately 5%). On the demand side, downstream demand includes smart community construction, intelligent building management, industrial park communication and security, campus and hospital internal communication, and transportation hub scheduling. Downstream customer lists include real estate developers, property management companies, government agencies, educational institutions, medical institutions, industrial park management companies, and transportation operators. On the business opportunity side, policy drivers include smart city construction, digital infrastructure development, and public safety system upgrades. Technological innovation drivers are reflected in upgrades to network communication technology, high-definition video encoding and decoding, cloud platform management, and integration with artificial intelligence recognition technology. Changing consumer demands are reflected in the continuously increasing demand for remote visualization, convenient management, and system integration capabilities, while also placing higher requirements on system stability and data security.

IP intercom systems, as a crucial direction for the digital upgrade of traditional intercom systems, are rapidly replacing analog systems and becoming the mainstream in the market. Their core advantages lie in networking, strong scalability, and ease of integration with other intelligent systems. From the demand side, the continuous advancement of smart community and smart building construction provides stable growth momentum for IP intercom systems. Simultaneously, the increasing demand for efficient communication and centralized management in industries such as industry, education, and healthcare is driving product penetration. From a technological development perspective, the system is evolving towards high-definition, intelligent, and platform-based solutions, achieving multi-functional integrated solutions through the integration of video surveillance, facial recognition, and mobile applications. From a competitive landscape perspective, industry concentration is gradually increasing, with companies possessing software platform capabilities and overall solution capabilities showing a clear advantage, while individual hardware manufacturers face shrinking profit margins. The key to future industry development lies in improving system compatibility, security, and service capabilities, while enhancing user stickiness through cloud platforms and data analysis. In the long term, IP intercom systems will replace traditional analog systems in the vast majority of mid-to-high-end application scenarios, but in cost-sensitive areas, they will still need to coexist with low-end products. The industry as a whole exhibits a development trend of parallel technological advancement and scenario expansion.
