An IPCE measurement system is a device used to measure the external quantum efficiency (IPCE) of photoelectric conversion devices, such as solar cells and photodetectors. It typically consists of a light source, a monochromator, a sample stage, and a photodetector. By illuminating the sample with light of different wavelengths and measuring the generated photocurrent, the IPCE of the sample at each wavelength can be calculated. This instrument is widely used in fields such as photovoltaics and optoelectronic technology for research, development, and quality control.
