According to our (Global Info Research) latest study, the global IPG Buffer market size was valued at US\$ 94.2 million in 2024 and is forecast to a readjusted size of USD 132 million by 2031 with a CAGR of 3.4% during review period.

IPG buffer (Immobilized pH Gradient Buffer) is a critical reagent used in the first dimension of isoelectric focusing (IEF) in two-dimensional electrophoresis, designed to establish a stable pH gradient on immobilized pH gradient strips. It consists of a series of ampholytes that form a continuous pH gradient under an electric field, enabling efficient separation of proteins based on their isoelectric points. IPG buffer is known for its high stability and reproducibility, significantly improving the resolution and accuracy of protein separation. It is widely used in proteomics research for the analysis of complex protein mixtures.
