Indoor positioning and indoor navigation (IPIN) technology make use of sensors, magnetic positioning, and Bluetooth low energy (BLE) technology to precisely track users indoors. IPIN can help people navigate indoors in places such as hospitals, museums, and university campuses.

Indoor positioning systems depend on three parameters, namely the dynamic positioning system platform, beacons that broadcast signals to smartphones, and the apps that make the systems indispensable to consumers. BLE beacons that assist indoor positioning are inexpensive; it is also easy to install and maintain them.
