## Abstracts

According to our (Global Info Research) latest study, the global Iptacopan Hydrochloride Capsules market size was valued at US\$ 194 million in 2025 and is forecast to a readjusted size of US\$ 964 million by 2032 with a CAGR of 11.0% during review period.

Iptacopan Hydrochloride Capsules are an oral, highly selective factor B inhibitor that reduces immune damage to the kidneys and related tissues by selectively inhibiting the overactivation of the complement alternative pathway. They are mainly used for the treatment of complement-mediated renal diseases such as IgA nephropathy and C3 glomerulopathy. As the world's first oral targeted complement inhibitor approved for IgA nephropathy, it features convenient administration, a clear mechanism of action, and high patient compliance. It can significantly reduce proteinuria, delay renal function decline, and provide a novel non-immunosuppressive therapeutic option for patients with complement-related kidney diseases. In 2025, global Iptacopan Hydrochloride Capsules production reached approximately 1.2 million bottles.

As the world's first oral highly selective factor B inhibitor, Iptacopan Hydrochloride Capsules have established an important clinical position in the field of complement-mediated renal diseases by virtue of their unique mechanism of targeted inhibition of the complement alternative pathway. Its core advantages lie in convenient administration and high compliance, which can effectively reduce proteinuria and delay renal function decline, providing a novel non-immunosuppressive treatment option for patients with limited previous therapeutic choices, such as those with IgA nephropathy and C3 glomerulopathy.

In terms of market layout, the drug is originally researched and exclusively

manufactured by Novartis, and has been approved for marketing in many major global markets. Meanwhile, it is simultaneously promoting indication expansion and medical insurance coverage in China, which has significantly improved its accessibility. In the competitive landscape, its oral dosage form differentiates it from traditional injectable complement inhibitors, giving it a first-mover advantage in the complement drug sector. Furthermore, ongoing clinical studies on a variety of complement-related diseases are continuously expanding its market potential and application scenarios. Overall, the drug is at a critical stage of penetration from core indications to multiple disease areas, with sufficient market growth momentum and broad prospects for future development.
