According to our (Global Info Research) latest study, the global IR Biotyper market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

IR Biotyper is a system that uses infrared spectroscopy to analyze bacterial cells and identify the species present. It works by shining infrared light on a sample of bacteria and measuring the unique pattern of wavelengths absorbed or transmitted by the bacterial cells. This pattern is then compared to a database of known bacterial spectra to identify the species.
