Abstracts

The global IR Biotyper market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

IR Biotyper is a system that uses infrared spectroscopy to analyze bacterial cells and identify the species present. It works by shining infrared light on a sample of bacteria and measuring the unique pattern of wavelengths absorbed or transmitted by the bacterial cells. This pattern is then compared to a database of known bacterial spectra to identify the species.

This report studies the global IR Biotyper production, demand, key manufacturers, and key regions.
