Abstracts

The global IR Curing Ovens market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Infrared (IR) energy is a heat source commonly used to apply industrial coatings, like powder coating, paint and more. Infrared creates this energy with electromagnetic waves that can cure many products in mere minutes. In fact, IR emitters provide temperatures ranging from 500 to 4,200 degrees Fahrenheit. During this process, a portion of the energy bounces off the surface, the coating absorbs some of the energy and the rest of the energy heats up the substrate.

This report studies the global IR Curing Ovens production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for IR Curing Ovens, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
