## Abstracts

According to our (Global Info Research) latest study, the global IR LED market size was valued at USD 460.6 million in 2023 and is forecast to a readjusted size of USD 796.3 million by 2030 with a CAGR of 8.1% during review period.

Infrared rays are electromagnetic radiations in the nonvisible spectrum of white light, which range from 1300 to 1700 nm. Infrared light emitting diode (IR LED) is a solid-state lighting (SSL) device, which emits light in the infrared range. It spreads the light on a vast area rather than concentrating it or in other words IR LED's have a wide field of view. These LED's find their extensive use in security and surveillance cameras, along with automated driving vehicles.

The IR LED market is gaining popularity in remote-controlled advanced security cameras, which help to keep a surveillance check, especially on the consumer goods in retail sector. Each of these cameras consists of multiple rings of IR LEDs to provide night vision capabilities, thus there could be from 20 to 40 IR LEDs sold with each camera. However, as the market for sensors in smartphones and tablets is witnessing saturation, the IR LED market is also observing slight saturation, in terms of advanced technologies & designs, which is expected to restrain the market growth.

The Global Info Research report includes an overview of the development of the IR LED industry chain, the market status of Optical Sensing (IR LED Chip, IR LED Package), Automated Drive Systems (IR LED Chip, IR LED Package), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of IR LED.

Regionally, the report analyzes the IR LED markets in key regions. North America and

Europe are experiencing steady growth, driven by government initiatives and increasing consumer awareness. Asia-Pacific, particularly China, leads the global IR LED market, with robust domestic demand, supportive policies, and a strong manufacturing base.
