The global IR-Visible Landing and Search Light market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

IR-visible landing and search light is a specialized lighting device used in aviation for landing and search operations. It emits infrared (IR) light that is not visible to the naked eye but can be detected by infrared sensors or night vision equipment. These lights are commonly used in military or covert operations where maintaining visibility while minimizing detection is important. The IR-visible landing and search light is typically mounted on aircraft or helicopters and can be directed manually or remotely to provide illumination for landing or search and rescue missions in low-light or nighttime conditions.
