The global IR Windows market size is expected to reach \$ 723 million by 2032, rising at a market growth of 8.9% CAGR during the forecast period (2026-2032).

An infrared window (also referred to as a viewport, viewing pane, sightglass, port or grill) is a generic term used to describe an inspection point that is designed to allow infrared radiation to transmit to the outside environment. Simply put, an infrared (IR) window is a data collection point for a thermal camera. All IR windows must fulfill the strength, rigidity and environmental requirements of the type of equipment into which it is installed. It must also be compatible with the infrared equipment being used. Some IR windows are simply a housing with an open center, and a cover that secures the opening. Typically, the IR window housing will contain a grill or an optic. The design, size, and material used are driven by considerations such as the required field-of-view, camera lens compatibility, intended environment, sealing requirements, and safety considerations.
