Iron amino acid chelate is a form of iron supplementation where iron is bound to amino acids, forming a stable chelated complex. Chelate refers to the bonding of a metal ion, in this case, iron, to an organic molecule, such as an amino acid. The amino acid serves as a ligand, providing stability to the iron molecule and enhancing its absorption and utilization in the body.

Iron amino acid chelate is often used as a dietary supplement to address iron deficiency or to support optimal iron levels in individuals with specific nutritional needs, such as pregnant women, athletes, or individuals with low iron intake.
