Abstracts

The global Iron Amino Acid Chelate market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Iron amino acid chelate is a form of iron supplementation where iron is bound to amino acids, forming a stable chelated complex. Chelate refers to the bonding of a metal ion, in this case, iron, to an organic molecule, such as an amino acid. The amino acid serves as a ligand, providing stability to the iron molecule and enhancing its absorption and utilization in the body.

Iron amino acid chelate is often used as a dietary supplement to address iron deficiency or to support optimal iron levels in individuals with specific nutritional needs, such as pregnant women, athletes, or individuals with low iron intake.

This report studies the global Iron Amino Acid Chelate production, demand, key manufacturers, and key regions.
