## Abstracts

The global Iron Casting [Ferrous Castings] market size is expected to reach \$ 6448 million by 2032, rising at a market growth of -2.1% CAGR during the forecast period (2026-2032).

Casting is a process in which a liquid metal is somehow delivered into a mold that contains a hollow cavity of the intended shape. The metal and mold are then cooled, and the metal part (the casting) is extracted. Casting is most often used for making complex shapes that would be difficult or uneconomical to make by other methods.

Cast iron is a family of metals produced by smelting metal, and then pouring it into a mold. The primary difference in production between wrought iron and cast iron is that cast iron is not worked with hammers and tools. There are also differences in composition—cast iron contains 2–4% carbon and other alloys, and 1–3% of silicon, which improves the casting performance of the molten metal. Small amounts of manganese and some impurities like sulfur and phosphorous may also be present. Differences between wrought iron and cast iron can also be found in the details of chemical structure and physical properties.

Due to the presence of carbon in cast iron, it may sometimes be confused with steel. However, there are significant differences. Steel contains less than 2% carbon, which enables the final product to solidify in a single microcrystalline structure. The higher carbon content of cast iron means that it solidifies as a heterogeneous alloy, and therefore has more than one microcrystalline structure present in the material.

It is the combination of high carbon content, and the presence of silicon, that gives cast iron its excellent castability.

Global Iron Casting [Ferrous Castings] key players include Waupaca Foundry, Grede Foundry, etc. Global top two manufacturers hold a share about 20%.

North America is the largest market, with a share over 40%, followed by China and Europe, both have a share over 30 percent.

In terms of product, Gray Iron Castings is the largest segment, with a share over 60%. And in terms of application, the largest application is Automotive, followed by Machinery & Equipment, Pipe & Fitting, Valves, Pumps & Compressors, Rail, etc.
