Abstracts

The global Iron Concentrate Powder market size is expected to reach \$ 240463 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

In 2025, global Iron Concentrate Powder production reached 1.58 billion tons, with an average selling price of USD 99/ton, production capacity of 1.82 billion tons, and a gross margin of 29.5%.

Iron Concentrate Powder refers to a powdered or fine-grained iron ore concentrate produced from iron ore through crushing, grinding, magnetic separation, flotation, gravity separation and dewatering. Its main components are iron oxides such as magnetite and hematite, and it generally has a higher iron grade and lower gangue impurity content than run-of-mine ore. Compared with raw iron ore, iron concentrate powder has higher Fe content and more stable chemical specifications, making it an important upstream raw material for sinter, pellets, blast furnace ironmaking, direct reduced iron and some powder metallurgy applications.

The Iron Concentrate Powder market is part of the bulk ferrous raw materials market, with demand mainly driven by global crude steel output, steel mill operating rates, infrastructure construction, real estate, machinery manufacturing, automobiles, shipbuilding and energy equipment. On the supply side, production is concentrated in iron ore resource-rich regions such as Australia, Brazil, China, India, Russia, Ukraine, Canada and South Africa, while Australia and Brazil play particularly important roles in the seaborne iron ore trade. In 2025, iron ore prices generally remained around USD 100/ton, lower than the previous year's level, reflecting weaker steel demand, relatively high port inventories and sufficient mine supply.

This report studies the global Iron Concentrate Powder production, demand, key manufacturers, and key regions.
