Abstracts

Iron deficiency and iron deficiency anaemia are highly common conditions present in up to one third of people worldwide.

Iron is a fundamental mineral needed to produce haemoglobin, a protein in red blood cells that carries oxygen around the body. Iron deficiency indicates a condition in which iron levels are below the minimal threshold.

If iron levels fall too low and are not treated, the body is unable to produce an adequate amount of haemoglobin and healthy red blood cells. This condition is called iron deficiency anaemia which results in symptoms affecting quality of life.

This report studies the global Iron Deficiency and Iron Deficiency Anaemia Treatment production, demand, key manufacturers, and key regions.
