Abstracts

The global Iron Ore market size is expected to reach \$ 146590 million by 2032, rising at a market growth of -2.4% CAGR during the forecast period (2026-2032).

Iron ore is a relatively abundant metallic element (it composes about 5% of the Earth's crust) and the main raw material used in steelmaking. Around 98% of global mined iron ore is used to make pig iron, which is an intermediate product of the steel-making process. The remaining 2% is used in several applications, such as production of cement, printing inks, plastics, cosmetics (eye shadow), artistic colors, fertilizer ingredients, and pigments. Currently, iron ore is mined in over 50 countries; however, the bulk of production comes from Australia, Brazil and China.

The global iron ore market is highly fragmented with small and large vendors. The key vendors in the market are BHP, Vale, Rio Tinto etc. The top 3 companies hold a share about 40%. Asia Pacific is the largest market, with a share about 70%, followed by South America with the share about 20%.

This report studies the global Iron Ore production, demand, key manufacturers, and key regions.
