The iron phosphate rotary kiln roaster is a device specially used for high-temperature heating treatment of iron phosphate materials. It is widely used in the smelting and extraction of iron phosphate ore. It is one of the important equipment in the production of phosphate fertilizers and the manufacture of lithium iron phosphate battery materials. The working principle of the iron phosphate rotary kiln roaster is to put the iron phosphate ore into the rotary drum. Through the rotation of the rotary drum, the ore is calcined at high temperature. The combustion equipment provides the required high-temperature heat source to ensure the temperature and atmosphere conditions during the roasting process. The material is roasted in the furnace drum while moving forward under the rotation of the furnace drum. The roasted material enters the next process from the discharge end.
