Iron removal equipment are devices that remove iron from well water. Chemicals are used to oxidize and extract the iron contained in the water, and the filtered well water can be used as drinking water or domestic water.

Iron removal equipment allows a wide range of uses for well water, including general drinking water, miscellaneous water, and industrial water. In cases where well water cannot be used due to high iron concentrations, iron removal equipment can be installed between the well pump and indoor piping to make the water even safer to use.
