According to our (Global Info Research) latest study, the global Ironless Linear Servo Motor market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Ironless linear motor does not contain an iron core or slot, and its overall weight is lighter than a motor with an iron core, and it does not produce cogging effects. Ironless linear motors are suitable for working environments that require minimal bearing friction, high acceleration capability for light loads, and maximum stable speed at extremely low speeds. The modular design of the magnetic circuit consists of two columns of magnetic tracks, which can maximize the generated thrust and provide a magnetic flux loop for the magnetic circuit.
