The global Irradiated Crosslinked Wire market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Irradiation cross-linked wire is a wire made by irradiation cross-linking process. Irradiation cross-linking is the use of high-energy electron beams generated by electron accelerators to bombard the insulating layer, breaking the molecular chains to form polymer free radicals, and then the polymer free radicals regenerate Combining cross-linking bonds, so that the original linear molecular structure becomes a three-dimensional network molecular structure to form cross-linking.
