## Abstracts

The global Irreversible Electroporation Ablators market size is expected to reach \$ 62.04 million by 2032, rising at a market growth of 8.9% CAGR during the forecast period (2026-2032).

Irreversible electroporation is a soft tissue ablation technique using ultra short but strong electrical fields to create permanent and hence lethal Nano pores in the cell membrane, to disrupt the cellular homeostasis. The resulting cell death results from apoptosis and not necrosis as in all other thermal or radiation based ablation techniques. The main use of IRE lies in tumor ablation in regions where precision and conservation of the extracellular matrix, blood flow and nerves are of importance. The technique is in an experimental stage and has not been approved for use outside of clinical trials. IRE is used in the NanoKnife System.

The world's leading manufacturers of irreversible electroporation abulators are AngioDynamics and Pulse Biosciences. North America is the largest consumption place, with a consumption market share nearly 56%. Following North America, Europe is the second largest consumption place with the consumption market share of 25%.
