According to our (Global Info Research) latest study, the global Ischemia Reperfusion Injury market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Reperfusion injury or reperfusion insult, sometimes called ischemia-reperfusion injury (IRI) or reoxygenation injury, is the tissue damage caused when blood supply returns to tissue (re- + perfusion) after a period of ischemia or lack of oxygen (anoxia or hypoxia). The absence of oxygen and nutrients from blood during the ischemic period creates a condition in which the restoration of circulation results in inflammation and oxidative damage through the induction of oxidative stress rather than (or along with) restoration of normal function.

Global Ischemia Reperfusion Injury key players include Angion Biomedica, Catalyst Biosciences, Ischemix Inc, etc.

North America is the largest market, with a share about 50%, followed by Europe, and Japan, both have a share over 20 percent.

In terms of product, Phase 2 is the largest segment, with a share about 40%. And in terms of application, the largest application is Kidney Injury, followed by Heart Injury, Intestine Injury, etc.
