Abstracts

The global Iscotrizinol market size is expected to reach \$ 76.10 million by 2032, rising at a market growth of 7.6% CAGR during the forecast period (2026-2032).

Iscotrizinol, CAS: 154702-15-5, is a highly efficient, oil-soluble organic triazine-based UV absorber. It strongly absorbs UVB and a portion of UVA radiation (within the 280-320 nm wavelength range); characterized by high photostability and efficacy at low concentrations, it is a widely used broad-spectrum sunscreen ingredient offering protection against both UVA and UVB rays.

The synthesis route for Iscotrizinol typically begins with the reaction of cyanuric chloride with 4-amino-N-tert-butylbenzamide to form a monosubstituted triazine intermediate, followed by a reaction with two equivalents of isooctyl 4-aminobenzoate to yield the target product. In 2025, global sales volume is projected to reach approximately 840 tons, with an average selling price of around \$43 per kilogram. The industry's gross profit margin typically ranges between 25% and 35%.

Iscotrizinol is an oil-soluble UVB filter that also extends its coverage into the UVA II spectrum. Its core competitive advantage lies not in the use of high concentrations, but rather in its ability to achieve a high SPF even at low inclusion levels, while simultaneously demonstrating excellent photostability and compatibility within oil-based formulations. DHBT represents a quintessential example of a regulatory-driven sunscreen agent. The European Union has listed it in Annex VI, permitting a maximum concentration of 10%; similarly, China's *Inventory of Existing Cosmetic Ingredients (2021 Edition)* has officially included this ingredient. However, the current U.S. OTC Sunscreen Monograph has not yet formally recognized it as an approved active sunscreen ingredient. Consequently, commercial demand for this product is

predominantly concentrated in Europe, China, South Korea, and other markets that embrace novel organic sunscreen agents, rather than in the United States.

Driven by heightened consumer awareness regarding sun protection as well as the increasing integration of sunscreen products into daily routines and year-round usage, the global sun care market continues to exhibit a robust growth trajectory. As a functional raw material for sun protection, Diethylhexyl Butamido Triazone benefits from a solid foundation of overall demand and retains significant potential for further growth in the medium to long term.
