According to our (Global Info Research) latest study, the global Isobutyl Quinoline market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Isobutyl quinoline, also known as β -isobutylquinoline, is an organic compound with the chemical formula C₁₅H₁₅N. It is a member of the quinoline family, which is a class of aromatic heterocyclic compounds.

Isobutyl quinoline is a yellowish to brownish liquid with a distinct aromatic odor. It is used primarily as a synthetic fragrance ingredient in the perfume and fragrance industry. The compound is valued for its warm, woody, and amber-like scent, which makes it a popular choice in creating oriental and chypre-type fragrances.

Due to its pleasant and long-lasting aroma, isobutyl quinoline is often used as a base note in perfume formulations. Base notes are the foundation of a fragrance and provide depth and longevity to the overall scent. They are the scents that are perceived after the initial top and middle notes have evaporated.
