The global Isobutyl Quinoline market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Isobutyl quinoline, also known as β -isobutylquinoline, is an organic compound with the chemical formula C₁₅H₁₅N. It is a member of the quinoline family, which is a class of aromatic heterocyclic compounds.

Isobutyl quinoline is a yellowish to brownish liquid with a distinct aromatic odor. It is used primarily as a synthetic fragrance ingredient in the perfume and fragrance industry. The compound is valued for its warm, woody, and amber-like scent, which makes it a popular choice in creating oriental and chypre-type fragrances.

Due to its pleasant and long-lasting aroma, isobutyl quinoline is often used as a base note in perfume formulations. Base notes are the foundation of a fragrance and provide depth and longevity to the overall scent. They are the scents that are perceived after the initial top and middle notes have evaporated.

This report studies the global Isobutyl Quinoline production, demand, key manufacturers, and key regions.
