## Abstracts

The global Isokinetic Samplers market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Isokinetic sampling techniques were developed to prevent skewed particulate concentration measurements due to inertial effects of particles as they enter a sampling nozzle. Basically, the idea is to sample at the same velocity as the gas stream so that the streamlines in the vicinity of the nozzle are straight.

This report studies the global Isokinetic Samplers production, demand, key manufacturers, and key regions.
