Abstracts

The global Isokinetic Strength Testing and Training Systems market size is expected to reach $ 182 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

Isokinetic Strength Testing and Training Systems are computerized rehabilitation and sports medicine devices designed to evaluate and train muscular performance while maintaining joint movement at a preset angular velocity. The system automatically adjusts resistance according to the force generated by the user, enabling concentric, eccentric, isometric, isotonic, and passive exercise modes. It measures torque, work, power, fatigue, range of motion, acceleration, and bilateral strength differences. Typical testing joints include the knee, shoulder, hip, ankle, elbow, and wrist. These systems are used for injury assessment, postoperative rehabilitation, athletic performance evaluation, clinical research, and objective return-to-sport decision-making.The industrial chain of Isokinetic Strength Testing and Training Systems includes upstream components such as electric motors, hydraulic actuators, torque sensors, encoders, load cells, control boards, computers, displays, positioning chairs, joint attachments, structural frames, and medical software. Midstream manufacturers integrate dynamometers, mechanical positioning modules, safety controls, testing protocols, databases, and reporting platforms into multi-joint or joint-specific systems and conduct assembly, calibration, validation, and certification. Downstream customers include hospitals, rehabilitation clinics, sports medicine centers, professional sports teams, universities, research institutes, military facilities, and elderly-care organizations. Supporting services cover installation, training, software upgrades, maintenance, recalibration, spare parts, and technical support.

The Isokinetic Strength Testing and Training Systems market is expected to expand steadily as hospitals, rehabilitation centers, sports medicine clinics, universities, and professional sports teams increase the use of objective muscle-performance assessment. Growth is supported by rising orthopedic procedures, sports injuries, aging populations, neurological rehabilitation, and evidence-based return-to-sport protocols. Multi-joint systems will remain the premium segment because they support comprehensive assessment, rehabilitation, and scientific research, while compact and joint-specific systems will improve accessibility for outpatient clinics. Software functions such as automated testing protocols, normative databases, cloud reporting, patient tracking, and electronic medical record integration will become increasingly important. Customers will focus on measurement accuracy, positioning repeatability, eccentric training capability, safety controls, workflow efficiency, and calibration services. High acquisition costs, specialist training requirements, long replacement cycles, and competition from portable dynamometers may limit faster expansion. Market competition will center on modular attachments, clinical evidence, localized service, financing options, and digital data management.In 2025, global Isokinetic Strength Testing and Training Systems production reached approximately 1,600 units, with an average global market price of around US$75,000 per unit. The gross profit margin of major companies in the industry was between 38%–52%. In 2025, the global production capacity of Isokinetic Strength Testing and Training Systems was approximately 2,133 units.

Report Scope

This report studies the global Isokinetic Strength Testing and Training Systems production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Isokinetic Strength Testing and Training Systems and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Isokinetic Strength Testing and Training Systems that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Isokinetic Strength Testing and Training Systems production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (Units)

Global Isokinetic Strength Testing and Training Systems production by Type, production, value, CAGR, 2021-2032, (USD Million) & (Units)

Global Isokinetic Strength Testing and Training Systems production by Application, production, value, CAGR, 2021-2032, (USD Million) & (Units)

This report profiles key players in the global Isokinetic Strength Testing and Training Systems market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include D. & R. Ferstl GmbH, TUR GmbH, Mitsubishi Electric Engineering Co., Ltd., Guangzhou Yikang Medical Equipment Industrial Co., Ltd., Xiangyu Medical Co., Ltd., Shandong Zepu Medical Technology Co., Ltd., PHYSIOMED ELEKTROMEDIZIN AG, Easytech S.r.l., Domino S.r.l., Sport Medical Technology, Inc., etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices

Detailed Segmentation:

Each section contains quantitative market data including market by value (US$ Millions), volume (production, consumption) & (Units) and average price (K US$/Unit) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
