According to our (Global Info Research) latest study, the global Isolated LED Driver market size was valued at US\$ 744 million in 2024 and is forecast to a readjusted size of USD 3185 million by 2031 with a CAGR of 23.4% during review period.

In an isolated LED driver the Input (AC side) & Output (LED side) are separated by power transformer which provides galvanic isolation. Isolated power supply transform the 110/220V AC voltage to the lower voltage by means of an isolation transformer

The market trend for isolated LED drivers was moving towards higher efficiency, better dimming capabilities, increased integration, and higher power density. LED lighting has gained widespread adoption due to its energy efficiency and long lifespan, and the demand for more advanced LED drivers has been increasing. Energy efficiency is a critical factor in LED driver design. Manufacturers are continually working on improving the efficiency of isolated LED drivers to minimize power losses and improve overall energy savings. Dimming capabilities have become more important in LED lighting systems, as they offer better control over the lighting environment and enable additional energy savings. LED drivers with smooth, flicker-free dimming options have seen growing demand.
