According to our (Global Info Research) latest study, the global Isolated and Non-Isolated DC-DC Converter market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Isolated and non-isolated DC-DC converters are common power converters used to convert DC power from one voltage level to another. There are some differences between them in circuit structure and working principle. Isolated DC-DC converters achieve electrical isolation between input and output through an isolation transformer, while non-isolated DC-DC converters do not have electrical isolation between input and output.

Isolated DC-DC converters have the characteristics of electrical isolation, safety, noise suppression, and multiple topologies. Non-isolated DC-DC converters have the characteristics of simplified design, higher efficiency, and miniaturization. The choice of an isolated or non-isolated DC-DC converter depends on the specific application requirements.
