The global Isolated Power Cabinet market size is expected to reach \$ 518 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

In 2025, the global production of isolation power cabinets reached 51,969 units, with an average selling price of US\$7,500 per unit. The global annual production capacity of isolation power cabinets is approximately 80,000 units, with a gross profit margin of approximately 24.7%. Isolation power cabinets are a special type of power system used to convert traditional mains power systems into ungrounded systems, effectively preventing accidents such as electric shock and protecting the safety of patients and medical staff. The upstream of isolation power cabinet production includes copper materials, insulation materials, circuit breakers, and disconnect switches. The midstream consists of isolation power cabinet manufacturers, while downstream applications are mainly in operating rooms, intensive care units, and delivery rooms.

The isolated power supply cabinet market is currently experiencing steady growth, with demand primarily coming from the medical, industrial, and data center sectors. In the medical industry, as hospitals increase their electrical safety requirements, especially in critical areas such as operating rooms and intensive care units, isolated power supply cabinets have become essential equipment for ensuring the safety of patients and medical staff, leading to continued market demand growth. In the industrial sector, industries such as semiconductor manufacturing and precision instrument production have stringent requirements for power supply stability and isolation performance, further driving the application of isolated power supply cabinets. Data centers, in order to ensure the safe and stable operation of servers, have also increased their procurement of isolated power supply cabinets. Overall, the market outlook is relatively optimistic; however, due to factors such as technological updates and policy regulations,

companies need to continuously adapt to changes and improve product performance and reliability.
