According to our (Global Info Research) latest study, the global Isolated Power Modules market size was valued at US\$ 987 million in 2025 and is forecast to a readjusted size of US\$ 1289 million by 2032 with a CAGR of 3.9% during review period.

Isolated Power Modules, also known as isolated DC-DC converters or galvanically isolated power supplies, are electronic devices designed to convert and regulate voltage while providing electrical isolation between the input and output circuits. This isolation is crucial for preventing direct current flow between the two sides, enhancing safety, and suppressing noise or interference. It's commonly achieved using a transformer, which allows energy transfer through electromagnetic induction without physical connection, ensuring that fluctuations or disturbances on the input side do not affect the output voltage.

The global market for Isolated Power Modules (IPMs) is witnessing significant growth, driven by the increasing demand for efficient power management solutions in various applications, including telecommunications, industrial automation, electric vehicles, and renewable energy systems.

Market Opportunities

Growth in Electric Vehicles (EVs): The surge in electric vehicle adoption necessitates efficient power management solutions for battery charging and management systems, driving demand for isolated power modules in automotive applications.

Industrial Automation and IoT: The push towards automation and smart manufacturing

in industries increases the demand for isolated power solutions to ensure safe and efficient power delivery to connected devices and systems.
