Abstracts

The global Isolated Transformer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The isolated transformer uses the electrical insulation between the primary and secondary winding coils of the transformer, and is a transformer with the function of isolating the distributed system. Isolation refers to the electrical insulation between the primary and secondary winding coils of the transformer. The main function of the isolation transformer is to completely insulate the primary side and the secondary side, and also isolate the circuit. In addition, the characteristics of high frequency loss of its iron Bi are used to suppress the high-frequency clutter from entering the control circuit.

This report studies the global Isolated Transformer production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Isolated Transformer, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
