Isolation Transformers for Medical IT Systems are specialized electrical safety devices used in medical isolated power supply systems to separate the medical electrical network from the main power grid. They provide galvanic isolation, reduce leakage current, improve power safety, and support continuous operation in critical medical locations. These transformers are commonly used in operating rooms, intensive care units, emergency rooms, catheterization laboratories, endoscopy rooms, and other areas where electrical safety and uninterrupted power are essential. They are usually combined with insulation monitoring devices, load monitoring modules, alarms, distribution panels, and medical electrical protection systems. The industrial chain of Isolation Transformers for Medical IT Systems includes upstream silicon steel sheets, copper windings, insulation materials, magnetic cores, temperature sensors, terminals, enclosures, varnish, resin, monitoring modules, circuit breakers, and electrical protection components. The midstream includes transformer design, winding, insulation processing, vacuum impregnation, assembly, temperature rise testing, leakage current testing, insulation testing, safety certification, and quality control. Downstream applications include hospitals, surgical centers, intensive care units, emergency departments, diagnostic rooms, medical laboratories, and healthcare infrastructure projects. Related services

include system design, installation guidance, commissioning, electrical safety testing, maintenance, replacement parts, and after-sales technical support.
