Abstracts

Isononyl alcohol (INA) is a flammable and colorless liquid used as an intermediate for making a variety of other chemicals which are used in many applications. It is primarily used in chemical reaction processes. It is not sold directly to the public for general consumer uses; however this product may be an ingredient in consumer and commercial applications such as plasticizers, stabilizers, and lubricants.

INA is produced by processing hydroformalation, hydrogenation, distillation and refinement from octenes that is formed by the dimerization of butanes.

Scope of the Report:

This report focuses on the Isononyl Alcohol in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. In the world wide, giant manufactures mainly distribute in USA and Europe, like ExxonMobil (USA) and Evonik (Germany), both have perfect products. These two companies approximately hold 65% of global production market share in 2015. The import and export percent of this industry is high. Because this industry has high technical barriers, the developing countries like China has an increasing demand while China only produce isononyl alcohol since 2015 October with the corporation of BASF. China mainly import the product from Germany and Singapore. The downstream plasticizer DINP of PVC demand is increasing, the replacement rate of DOP can affect the demand of DINP, and the application of DINCH increasing more rapidly.

The worldwide market for Isononyl Alcohol is expected to grow at a CAGR of roughly 5.8% over the next five years, will reach 2520 million US\$ in 2023, from 1800 million US\$ in 2017, according to a new GIR (Global Info Research) study.
