## Abstracts

The global Isophorone market size is expected to reach \$ 490 million by 2032, rising at a market growth of 2.4% CAGR during the forecast period (2026-2032).

Isophorone is a clear to pale yellow liquid with a distinguished odour. Less dense than water and insoluble in water. Boiling point 420 F. Flash point near 200 F. Contact irritates skin and eyes. Toxic by ingestion.

Isophorone is a widely used solvent and chemical intermediate. The acute (short-term) effects of isophorone in humans from inhalation exposure include eye, nose, and throat irritation. Chronic (longterm) exposure to isophorone in humans can cause dizziness, fatigue, and depression.

The key global producers of isophorone are Evonik, Arkema, SI Group, Wanhua, Prasol, etc. The largest producer is Evonik, with 80% market share. Global origins are mainly located in North America, Europe, China, India and other regions, with Europe being the region with the highest production capacity. In terms of product categories, purity above 99% holds 99% of the market share, while purity below 99% only accounts for 1% of the market share. In terms of its applications, chemical intermediates and pesticides and herbicides are its main application areas, with a market share of 30%, in addition to paints and resins are also its applications.

This report studies the global Isophorone production, demand, key manufacturers, and key regions.
