Abstracts

Isopropanol is a colourless, flammable liquid and a low-cost solvent. This solvent finds innumerable applications in many industries such as cosmetics, pharmaceutical, paints & coatings, cleaning, etc. It is used to create many other compounds such as isopropyl amines, isopropyl esters and derivative ketones among others.

According to our (Global Info Research) latest study, the global Isopropanol market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

To meet the increasing demand for multifunctional cosmetic and personal care products, chemical companies are working on developing new chemicals to meet the growing demand for ingredients required by the cosmetic and personal care industry. This will lead to an increase in the use of isopropyl alcohol which is used as a solvent during the manufacturing process of cosmetic and personal care products. Since isopropyl alcohol is miscible with non-polar solvents as well as water, it is widely used in cleaning agents. This is yet another factor driving the growth of the isopropyl alcohol market.
