Abstracts

The global Isopropyl Myristate (IPM) market size is expected to reach \$ 137 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032). Isopropyl Myristate (IPM) is a colorless, oily liquid, an ester of isopropyl alcohol and myristic acid. It is widely used in cosmetics and pharmaceuticals as an excellent non-greasy emollient, solvent, penetration enhancer, and emulsifier. It moisturizes the skin, softens the stratum corneum, and helps in the absorption of active ingredients, resulting in a light and easily spreadable product texture.

Isopropyl myristate (IPM) is primarily produced from myristic acid and isopropanol through an esterification reaction. It is widely used in cosmetics (as an emollient, moisturizer, and solvent) and in the pharmaceutical field (for transdermal delivery and as a pharmaceutical excipient). Global sales are projected to be approximately 56,300 tons in 2025, with an average market price of around US\$1,800 per ton. The industry's gross profit margin is approximately 13-23%.

The market is increasingly demanding higher purity and functionality for isopropyl myristate (IPM), especially in the Asia-Pacific region, which shows strong consumption potential. The continued prosperity of the cosmetics and personal care industry is its core growth engine. Thanks to its excellent penetration, superior smoothness, and non-greasy feel, IPM has become an indispensable emollient and solvent in skincare and makeup products.

This report studies the global Isopropyl Myristate (IPM) production, demand, key manufacturers, and key regions.
