The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Isostatic pressure isotropic graphite is a kind of graphite material that crystals are disorderly arranged while having an isotropic structure. Isotropic graphite is a ultra-fine grain graphite used for applications where the mechanical properties of other fine grain graphite are inadequate. Its name is derived from the method of production: During the forming process the material is isostatically pressed i.e. with equal pressure from every side. Therefore the material shows typically an isotropic property behavior. Nowadays Isotropic Graphite is quite popular material that is in great demand in the photovoltaic industry and is indispensable in semiconductors production.
