According to our (Global Info Research) latest study, the global Isothermal Forging Press market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Isothermal forging press is a type of forging press that utilizes an isothermal process to shape metal into desired forms. In isothermal forging, the temperature of the metal is maintained constant throughout the process, which helps in reducing the strain hardening effect and improving the material flow characteristics. This results in better dimensional accuracy, improved mechanical properties, and reduced energy consumption compared to conventional forging processes. The isothermal forging press is equipped with heating and cooling systems to maintain the desired temperature during the forging operation.
