Abstracts

The global ISR Robot market size is expected to reach \$ 79929 million by 2032, rising at a market growth of 9.4% CAGR during the forecast period (2026-2032).

In 2025, global ISR Robot production reached approximately 0.8 million units, with an average global market price of around US\$ 50,000 per unit. Annual production capacity is 1 million units. Gross Profit Margin: 40%. An ISR (Intelligence, Surveillance, and Reconnaissance) robot is an unmanned robotic system designed to collect, process, and transmit critical situational information in real time, typically operating in complex or high-risk environments where human presence is limited or unsafe. The ISR robot industry chain spans upstream suppliers of core components such as sensors (electro-optical/infrared cameras, radar, LiDAR), semiconductors, communication modules, and power systems; midstream manufacturers and integrators including defense contractors like Lockheed Martin, Northrop Grumman, and Elbit Systems that design and assemble ISR robotic platforms and software systems; and downstream end users such as military forces, border security agencies, law enforcement, and critical infrastructure operators, supported by service providers offering data analytics, maintenance, and lifecycle management.

This report studies the global ISR Robot production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for ISR Robot and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
