## Abstracts

The global IT Architecture Services market size is expected to reach \$ 65010 million by 2032, rising at a market growth of 11.4% CAGR during the forecast period (2026-2032). IT architecture services refer to professional services that systematically plan, design, govern, and continuously optimize applications, data, technical infrastructure, and security capabilities around an enterprise's information technology system, starting from business objectives. The aim is to build a scalable, integrable, governable, and sustainably evolving IT architecture system to support enterprise digital transformation and long-term business development.

### Gross Margin Levels

The gross margin of IT architecture services exhibits a typical stratified structure: high for high-end consulting, medium for engineering-based delivery, and relatively more stable but not necessarily higher for managed services. On the one hand, high-end work such as enterprise architecture/goal blueprints/roadmaps and governance systems relies on senior architects and industry methodologies, resulting in highly replicable and productizable deliverables, thus facilitating premium pricing and higher gross margins. On the other hand, architecture implementation often involves significant platform engineering, integration, and transformation work, which is affected by project cycles, scope changes, and resource utilization, leading to a gross margin closer to that of 'scale-based professional services.' When services extend to long-term contracts such as continuous architecture governance, cloud cost optimization, and platform operations (FinOps/Platform Ops), while the unit price may not be the highest, the better predictability and utilization resulting from contract renewals and standardized delivery often lead to superior overall profitability. Based on industry practice, the common gross margin range for IT architecture services can be summarized as approximately 20%-45%: boutique architecture consulting/methodology-driven services are closer to the upper end, while large-scale system integration and strong delivery services are

closer to the middle.

## Industry Drivers

The fundamental reason for the rising demand for IT architecture services is that enterprises are simultaneously experiencing a cycle of 'multi-cloudification + AI-driven development + enhanced security and compliance + modernization of legacy systems.' Institutions such as IDC indicate that global IT spending will be in a high-growth phase in 2025, with significant increases in enterprise investment in software, cloud, and AI infrastructure, making architecture blueprints, governance frameworks, reference architectures, and migration roadmaps 'pilot projects.' At the same time, enterprises generally rely on external consulting to fill capability gaps, especially in complex areas such as GenAI/Agentic AI, data, and security governance. As enterprises increase their requirements for a 'scalable, governable, and auditable' technical foundation (multi-cloud governance, data sovereignty, zero trust, observability, and cost constraints), architecture services are gradually shifting from one-off design to 'continuous governance and platform-based operation,' thereby driving this segment to maintain growth elasticity higher than the overall IT services market.
