Abstracts

According to our (Global Info Research) latest study, the global IT Asset Recycling market size was valued at US\$ 18798 million in 2025 and is forecast to a readjusted size of US\$ 32396 million by 2032 with a CAGR of 8.0% during review period.

IT asset recycling refers to the process of collecting, processing, and reusing or recycling electronic equipment that is no longer needed or has reached the end of its useful life. This includes computers, laptops, servers, printers, monitors, and other electronic devices. The goal of IT asset recycling is to minimize waste and environmental impact by diverting these items from landfills and extracting value from them through reuse or recycling. IT asset recycling is an important part of the circular economy and sustainable business practices. It helps to minimize the environmental impact of electronic waste and supports the reuse of valuable materials.

As countries continuously improve their environmental and data security regulations regarding electronic waste, mandatory standards are being introduced for the dismantling, disposal, and data destruction of obsolete IT assets. Unqualified small service providers are gradually being eliminated, while companies with full-process compliance certifications are becoming the market mainstream.

Enterprises are increasingly concerned about the risk of sensitive data leakage from obsolete IT equipment. Value-added services such as data erasure, physical destruction, and destruction traceability have become core demands. Service providers must possess professional data security certifications, and full-process traceability has become standard.

The industry is upgrading from traditional 'dismantling and recycling metals' to

component-level recycling and complete machine refurbishment and reuse. The testing, repair, and secondary circulation of high-value core components (chips, memory, hard drives) are becoming new growth points, improving asset residual value and resource utilization.
