Abstracts

According to our (Global Info Research) latest study, the global IT Infrastructure AIOps Platform market size was valued at US\$ 1432 million in 2025 and is forecast to a readjusted size of US\$ 3228 million by 2032 with a CAGR of 12.2% during review period.

An IT Infrastructure AIOps (Artificial Intelligence for IT Operations) platform is an intelligent operations system that integrates artificial intelligence, big data analytics, and automation technologies, focusing on the full-stack monitoring, prediction, and optimization of IT infrastructure—including servers, storage, networks, virtualization layers, and underlying cloud resources.

The widespread adoption of IT infrastructure AIOps platforms stems primarily from the surge in infrastructure scale and complexity driven by deepening enterprise digital transformation; the challenges in dynamic resource management introduced by the proliferation of cloud-native and virtualization technologies; and the stringent business demands for high availability and rapid fault recovery. Concurrently, the limitations of traditional monitoring tools—particularly regarding alert overload, high false-positive rates, and a lack of contextual correlation—have become increasingly apparent, while the maturity of AI and big data technologies has provided a viable pathway for achieving precise prediction and intelligent decision-making. Furthermore, the imperatives to reduce manual operations costs, enhance resource utilization efficiency, meet compliance and audit requirements, and accelerate the implementation of DevOps and SRE practices have further driven enterprises to position AIOps as a pivotal component of their modern IT governance frameworks.
