IT security is the practice of preventing unauthorized access, use, disclosure, disruption, modification, inspection, recording or destruction of information. To standardize this discipline, academics and professionals collaborate and seek to set basic guidance, policies, and industry standards on password, antivirus software, firewall, encryption software, legal liability and user/administrator training standards. This standardization may be further driven by a wide variety of laws and regulations that affect how data is accessed, processed, stored, and transferred.

The global IT security as a service market is growing steadily as cloud Services remain the most promising market over the decade. Organizations can reduce risks by virtualizing applications and users, and integrating data leak protection functions into a secure cloud-hosted environment. This enables users to experience an improved traditional environment, while the data remain in on premise end-point.
